LIX Film is the un-stretched film which the main material is linear low-density polyethylene (LLDPE). It is superior in foreign matter sealing property, hot tack property, cold tolerance, and bag tearing resistance.

FUTURE

## USE

L4182 is the type which has added antistatic properties.
Due to the filling process, it can prevent the content from being bitten in the seal part due to static electricity.
It is superior in blocking resistance, and the laminated roll product can laminate with no powder and package automatically.

Powder products, Rice bags etc.

General physical property of the LIX Film L4182 type
